OPERATIONS RESEARCH

Stefanos A. Zenios,
Stanford University, Editor-in-Chief

Operations Research, as the flagship journal of the profession, strives to publish results that are truly insightful. Each issue aims to publish high-quality papers that represent the true breadth of the methodologies and applications that define the field.

This bimonthly journal serves the entire Operations Research community including practitioners, researchers, educators, and students. In that respect, the papers that appear in the journal must satisfy three essential requirements: operations-focused, scientific, and broad. Research articles include those concerning the definition of new problem domains for the field, innovative conceptualizations and mathematical formulations of problems, and the development of new methodologies to attack known and new problems.

"Business Week continues to include four INFORMS journals (*Marketing Science, Operations Research, Management Science,* and *Information Systems Research*) among the top 20 journals valued by business school deans and academic program directors."
